

Imation D20 Disc Publisher

Leading through innovation

Leave a professional, lasting impression with the **D20 Disc Publisher from Imation**.

This easy to use CD/DVD publishing solution features a compact, professional design that fits right on your desktop. With a capacity of up to 20 discs, it automatically duplicates and prints brilliant direct-to-disc inkjet graphics on any standard inkjet printable discs. Deliver optimal image quality and color in concert with Imation AquaGuard™ discs. Quick setup ensures you'll be burning and printing discs in minutes with the included easy to use software. The D20 Disc Publisher combined with Imation AquaGuard discs, ink and image creation software ensures maximum design flexibility, brilliant colors from hub to edge, and quick drying graphics that resist smearing when exposed to water or humid conditions.

Features & Benefits

Easy to Use, Professional Results – Simple, quick setup and easy to use software ensure high quality results that leave a professional, unique impression.

Seamless Printing and Burning – Extensive testing with Imation printable discs guarantees both compatibility and optimal results, delivering brilliant colors and image quality in concert with Imation AquaGuard media.

Complete Solution – Used in combination with Imation AquaGuard discs, the D20 Disc Publisher and image creation software provide a complete solution with impressive, professional results that are smudge and smear resistant.

White Inkjet Printable CDs & DVDs with AquaGuard™ Surface

Imation's inkjet printable CDs and DVDs with AquaGuard surface offer a powerful advantage – the ability to print fast-drying custom graphics that won't wash away and are smudge and smear-resistant right from CD/DVD inkjet duplicating equipment or desktop disc printers.

The AquaGuard surface features a proprietary nanoparticle coating that grips and holds the ink to lock images in place exactly where they are applied. No more waiting for ink to dry before CDs and DVDs can be handled safely. A whiter, brighter surface makes the images pop, and the surface uniformity from the hub to the disc edge minimizes hub shading, thus maximizing design flexibility.
